

What is [Dunnage and/or Returnable Packaging](#)?

Returnable packaging, or dunnage, is a win-win for everyone. The plastic material ensures longevity, thereby reducing long-term costs. Returnable containers often increase safety for workers—with the addition of small modifications, such as handles, etc. Returnable packaging also lessens environmental impact, as it is not only long-lasting but also recyclable. **Helton, Inc.** offers [returnable packaging](#) options for many industries.

Dunnage/Returnable Packaging: Reusable packaging is often used by manufacturers and/or processors and their suppliers, or customers, in a well-organized system. Returnable packaging can include: reusable pallets, bulk containers, and various other types of containers and dunnage which assist in the delivery of products.

Projects: Helton can design your project from scratch or use existing designs for your packaging needs. We design plastic trays which can be used in racks, totes, or boxes using 100% recyclable materials. In addition, our ability to also manufacture cast urethane dunnage, guarantees we can meet the shock absorption packaging applications without any mark-offs or abrasions. We also have 5-axis capabilities, ensuring we can meet every custom need.
