

What is Cast Urethane?

Urethane is a synthetic crystalline compound used in making pesticides and fungicides, and formerly as an anesthetic.

Helton, Inc. offers many cast urethane products, and we have the abilities required to bring your project to life.

Cast Urethane: Cast urethanes are suited for smaller runs of parts and prototyping. Because the cost for soft tooling is lower, cast urethanes are excellent resources. They are also abrasion resistant, can face cold and/or hot temperatures, reduce noise, and have excellent tear strength.

Projects: Our primary focus has been on returnable packaging for the automotive industry; however, we also service other markets for cast urethane. In recent years, we have produced custom seats, specialized seals, and pipe identification. In our own agricultural line, we have developed flexible urethane louvers/ blinders for head chutes and

alleyways. No project is too big or too small for our experienced cast urethane department.
